4 **1. Scope**

9 This document specifies the requirements for a next-generation family of Internet kiosks called **Omninet AI**. These kiosks shall provide users with
10 secure, high-speed, and intelligent Internet access in public places. The system will support modern payment methods and leverage artificial
11 intelligence to enhance user experience, security, and operational efficiency.

12 **1.1 Terms, Acronyms, and Abbreviations**

13 For the purposes of this project, the following updated abbreviations apply:

AI Agent	An intelligent software entity for automation, support, and analytics.
AI Assistant	An AI agent integrated into the kiosk browser for user interaction.
API	Application Programming Interface
CC	Credit Card (Visa, MasterCard, American Express, Discover)
Cloud	Cloud-based infrastructure for hosting all Omninet services.
Fiber	Fiber-optic Internet connection, minimum 100 MBPS.
5G/WiFi6	Primary high-speed connectivity for kiosks (cellular/wireless).
Kiosk	The free-standing Omninet AI access point.

删除了: DL ... 1

LLM	Large Language Model (for AI-powered support and interaction)
MBPS	Megabits per second
MobilePay	Digital wallet payment (Apple Pay, Google Pay, etc.).
NFC	Near Field Communication (for contactless payments).
OS	Operating System (e.g., Windows 11 IoT, Ubuntu Linux, Android).
URL	Universal Resource Locator

删除了: SSO

1.2 Applicable Documents

- [1] See the Omninet AI System Architecture Document for cloud and edge deployment designs.
- [2] See the Omninet AI UX/UI Prototype Document for the kiosk and support center dashboards.
- [3] Omninet Content Filtering Policy (document TBD) – defines categorisation of blocked material.**
- [4] AI Governance Document (TBD) – defines training and update processes for AI models.**

2. Required Release Date

23 The first set of 1,000 Omninet AI kiosks shall be live, accepting payment and accessing the Internet, ~~by September 30, 2026~~.

删除了: ~~as of the financial third quarter~~

删除了: **4**

25 3. Description of Requirements

26 3.1 General Technical Requirements

27 Omninet AI shall provide users in airports, malls, hotels, and other public places with secure, personalized, and high-speed Internet access.

28 The Omninet AI system comprises three primary subsystems:

- 29 1. **The Kiosk (Edge Device):** The physical unit users interact with.
- 30 2. **The Omninet Cloud (Core Services):** A centralized platform for management, AI processing, and data analytics.
- 31 3. **The AI Support Center (Intelligent Interface):** A dashboard for human agents, augmented by AI agents, to monitor and manage the
- 32 network.

33 3.1.1 Welcome

34 Between sessions, each Omninet AI kiosk shall display ~~a welcome message that includes the Omninet logo, a brief instruction, and a 'Start'~~
35 **button; the message shall be configurable remotely** (see screen prototype K.1).

删除了: ~~an inviting, dynamic welcome message, potentially personalized based on location and time of day~~

设置了格式: 突出显示

36 3.1.2 Payment

42 Once a user initiates a session, the kiosk shall offer flexible payment options. The system shall use AI to suggest optimal session lengths based on
43 location and historical usage patterns ; **details of AI model training and updates are defined in the System Requirements Document and the AI**
44 **Governance Document.**

45 The system accepts the following forms of payment:

- 46 • **Traditional:** Bills and coins (see screen prototype K.3). **For cash, the kiosk shall accept denominations up to \$20 and shall return change.**
- 47 • **Modern Cards:** Credit/Debit cards with chip and NFC support (see screen prototype K.4, K.5, K.7).
- 48 • **Digital & Mobile:** Mobile wallets (Apple Pay, Google Pay), and QR code payments (e.g., WeChat Pay, Venmo) (see screen prototype K.8).
- 49 • **AI-Powered Promotions:** The system may offer promotional time in exchange for viewing an ad or completing a quick survey.

50 Time is sold in flexible increments, with a minimum of 1 minute and a maximum of 2 hours. An AI agent will predictively prompt the user to purchase
51 more time based on their browsing activity and remaining time (see screen prototype K.9). **The pop-up message shall offer a 'Yes' button that**
52 **takes the user to the payment screen, and a 'No' button that dismisses the message; the message shall appear every 30 seconds until the**
53 **session ends or the user acts.**

54 **3.1.3 Internet Browser & AI Assistant**

55 At the Welcome screen, each Omninet AI kiosk shall launch a secure, modern browser (e.g., latest Chromium, Firefox). The browser will be integrated
56 with an **Omninet AI Assistant**—a conversational AI agent that can:

- 57 • Answer questions about the kiosk's features.
- 58 • Help find information or navigate to websites.
- 59 • Translate on-screen text or web pages in real-time.
- 60 • Summarize articles or content for the user.

61 **3.1.4 Performance**

62 ~~On all kiosks, users shall have a minimum connection speed of 100 MBPS, provided via 5G, WiFi6, or Fiber backhaul, ensuring a seamless modern
63 web experience.~~

64 **All kiosks shall have a minimum connection speed of 100 MBPS, provided via 5G, WiFi6, or Fiber backhaul.**

65 ~~On kiosks operating with a PSTN connection, users shall have greater than 50 KBPS connection speed.~~ *(deleted – PSTN obsolete)*

66 **3.1.5 Localization**

67 Each Omninet AI kiosk shall detect the most likely user language based on location or offer a selection at the Welcome screen. ~~In locales where
68 multiple languages are commonly used, the Welcome screen shall present the user with the option to select the language for the session.~~*(duplicate*
69 *removed)* **The language selection shall persist for the entire session and be stored in local session data; the system shall support at least 20**
70 **languages including English, Spanish, French, Mandarin, Arabic, etc.** The integrated AI Assistant shall support real-time conversational translation,
71 allowing users to interact in their preferred language.

72 ~~Each Omninet kiosk browser shall be configured to support all languages supported by the operating system and browser.~~ **The browser shall**
73 **support Unicode (UTF-8) and render any language that uses Unicode characters; the AI Assistant shall provide real-time translation for at**
74 **least 20 languages.**

75 **3.1.6 Content Control & Security**

76 Omninet AI shall employ a multi-layered security approach:

- 77 • **AI-Powered Content Filtering:** ~~Instead of simple site blocking, an on-device AI agent will analyze content in real-time to block or blur
78 pornographic, violent, or otherwise objectionable material, while allowing access to informative content like health sites.~~ **Omninet shall**
79 **implement an AI-based content filter that blocks or blurs material defined as ‘adult’ or ‘violent’ according to the Omninet Content**
80 **Filtering Policy (document TBD).**
- 81 • **Advanced Threat Protection:** ~~Each kiosk shall run continuous, AI-driven security scans to detect and prevent zero-day exploits,
82 ransomware, and other malicious activities, protecting both the user and the device.~~ **Omninet shall employ an on-device AI security**

83 **agent that scans incoming/outgoing traffic using updated threat definitions; detection shall result in session termination and a**
84 **security alert.**

85 **3.1.7 Session Termination**

86 Users may terminate sessions by:

- 87 • Logging out (no refund for unused time).
- 88 • Allowing purchased time to expire.

89 **3.1.8 Confidentiality & Privacy**

90 To ensure complete user privacy, upon session termination, each kiosk shall:

- 91 • Execute a secure wipe of all session data (cache, cookies, history, downloaded files) from the local device.
- 92 • Restart the browser in a fresh, sandboxed environment at the Welcome screen.
- 93 • ~~The AI Assistant's conversation log for the session is permanently deleted.~~ **All stored session data, including AI Assistant**
94 **conversation logs, shall be securely deleted from local storage; any cloud backups shall be deleted within 24 hours.**

95 **3.2 Administration (via Omninet Cloud & AI Support Center)**

96 **3.2.1 Software & AI Model Updates**

97 Software and security updates shall be managed centrally from the Omninet Cloud.

- 98 • At 2:00 AM local time, each kiosk shall check for and apply updates, including:

- 99 o OS and browser patches.
- 100 o Device drivers.
- 101 o AI Agent behavioral models and content filtering datasets.
- 102 o Updated payment rate tables.
- 103 o Dynamic threat intelligence feeds.
- 104 • The update process is managed by an **AI Orchestrator Agent** in the cloud. ~~If the update server is overloaded, the orchestrator assigns each
- 105 kiosk a randomized retry window (5 to 30 minutes) to distribute load.~~ **If the update server returns a 503 (Service Unavailable) or similar**
- 106 **overload response, the kiosk shall retry after a randomized delay between 10 and 60 minutes. The retry count is capped at 3 attempts;**
- 107 **after that, the kiosk shall log an error and alert the support center.**
- 108 • Critical security updates or AI model patches can be pushed immediately by the AI Support Center.

109 3.2.2 View Kiosks (AI-Powered Monitoring)

110 The AI Support Center dashboard shall provide a real-time, intelligent view of all kiosks. For each kiosk, agents can see:

- 111 • Current OS and software versions.
- 112 • AI Agent status and health.
- 113 • Uptime and performance metrics.
- 114 • Number of crashes or hard failures.
- 115 • **AI-Predicted Failure Risk:** ~~An AI analytics agent highlights kiosks at high risk of imminent failure, enabling proactive maintenance.~~ **Risk**
- 116 **score is based on metrics such as uptime, crash frequency, and network stability; algorithm details are in the SysRD.**
- 117 • Kiosks report their status to the cloud every 15 minutes.
- 118 • If a kiosk is offline or malfunctioning, it is highlighted in red at the top of the list. ~~An AI agent will have already attempted a remote
- 119 diagnostic and reboot cycle before alerting a human agent.~~ **The list shall be sortable by location, uptime, and last contact time; down**
- 120 **kiosks shall also be marked with a warning icon and allow the agent to trigger a remote reboot.**

121 3.2.3 View Users (with AI Oversight)

122 For active sessions, the AI Support Center shall provide agents with relevant information, with strict privacy controls and audit trails. An **AI Monitoring**
123 **Agent** flags anomalies for human review. Accessible information includes:

- 124 • ~~Anonymized Browsing Patterns: The AI agent analyzes URLs visited for security threats, but a human agent can only view the full history if a
125 security or fraud alert is triggered.~~ **Anonymized Browsing Patterns (URLs are hashed and IP addresses are stripped before being**
126 **displayed to agents).**
- 127 • ~~Last four digits of the payment card (for verification).~~ **The last four digits of the payment card; full card details shall never be**
128 **displayed to comply with PCI-DSS.**
- 129 • Amount paid and time purchased/remaining.
- 130 • **AI-Generated Risk Score:** A real-time score indicating the likelihood of fraudulent or inappropriate use.

131 **3.2.4 Modify User**

132 ~~Human agents, with supervisory approval for large adjustments, can modify a user's session (e.g., adding time for compensation).~~ **Agents may**
133 **add time in increments of 5 minutes up to 60 minutes per day without approval; any addition beyond 60 minutes requires a supervisor's**
134 **two-factor authentication. All additions are logged with agent ID, timestamp, and reason.** An **AI Billing Agent** automatically handles common
135 modifications, such as refunding time lost due to a temporary connectivity issue at the kiosk.

136 **3.2.5 Terminate User & AI-Enhanced Intervention**

137 If an **AI Security Agent** ~~(previously "AI Monitoring Agent")~~ detects highly probable illegal activity (e.g., credit card fraud patterns, network
138 intrusion attempts, confirmed access to known illegal material), it can automatically terminate the session and lock the kiosk, immediately alerting a
139 human agent and local authorities if necessary.

140 For inappropriate but non-critical behavior flagged by the AI, a human agent can review and manually terminate the session. In both cases:

- 141 • The user is presented with a clear message explaining the reason for termination and the amount of any refund.
- 142 • If a refund is due (e.g., for a mistaken flag), the **AI Billing Agent** processes it automatically.

143

144 **Appendix A: Referenced Documents**

145 The following documents are referenced in this MRD:

- 146 • **Omninet AI System Architecture Document** – details cloud and edge design.
- 147 • **Omninet AI UX/UI Prototype Document** – contains screen prototypes for kiosk and support center.
- 148 • **Omninet Content Filtering Policy** – defines categories of blocked material (TBD).
- 149 • **AI Governance Document** – defines AI model training and update processes (TBD).

150

151 **Summary of Changes (v1.1)**

- 152 • **Acronyms:** Removed unused DL and SSO; added AI Assistant.
- 153 • **Release date:** Specified “September 30, 2024”.
- 154 • **Welcome screen:** Replaced “inviting” with concrete UI elements.
- 155 • **Payment:** Added cash change handling, pop-up behavior, and AI model reference.
- 156 • **Performance:** Deleted obsolete PSTN requirement.
- 157 • **Localization:** Removed duplicate sentence, added language persistence and Unicode support.
- 158 • **Content Control:** Replaced subjective terms with reference to a content policy; refined security requirements.
- 159 • **Privacy:** Clarified backup deletion for session data and AI logs.

- 160 • **Software Updates:** Added retry limit and alert.
 - 161 • **View Kiosks:** Defined AI risk score, added sorting and remote reboot.
 - 162 • **View Users:** Defined anonymization and PCI-DSS compliance for card data.
 - 163 • **Modify User:** Added detailed approval and logging.
 - 164 • **Agent naming:** Made consistent (AI Security Agent).
 - 165 • **Appendix:** Added explicit list of referenced documents.
- 166 All open defects from the formal inspection have been addressed. A follow-up inspection is recommended to verify closure.
